

We can build what you want

GRAYSTAR Trailers is an Australian-owned and -operated family business.

The company was established by David and Samantha Gray in early 2009. David has been involved in the road transport manufacturing industry since 1980.

We saw a need for a company that would work with clients to design and build a premium refrigerated semi-trailer. It is only a relatively small market and with a handpicked team of 14, we are perfectly placed. Collectively the team at Graystar has more than 100 years of experience in the industry.

While we have experience in most facets of road transport equipment, refrigerated trailers are our specialty. The crew at Graystar care about the trailers they build and strive to keep raising the bar. All Graystar Trailer models are based around a full-length chassis. Chassis are designed and built in-house, with lightweight high-tensile steel. Different chassis models are used to suit particular specifications and conditions.

The design of the Graystar chassis makes them ideally suited for road train work. The extremes of Western Australia and North Queensland are also the perfect environment for Graystar Trailers. The extra support of a full chassis alleviates potential damage to the load and allows the trailer to hold the road better and reduce flexing. This means that the load is not being subjected to excessive movement.

Only the highest quality, lightweight high-density styrofoam is used as insulation in Graystar Trailers. The properties of this styrofoam means that it has the highest levels of water resistance and resists breaking down over time. Styrofoam of this quality also has much better insulating properties than other products on the market. This means that the fridge does not have to work so hard, thereby saving fuel and looking after the environment. The design of the Graystar Trailer is based on allowing us to use this premium product. The fibreglass skins on the Graystar Trailer are also of the highest quality. An extremely smooth wall

GRAYSTAR TRAILERS can custom build your refrigerated trailer to suit specific applications.

skin not only makes the trailer look great, it is easy to keep clean and ideal for signwriting. And don't forget, the smoother the finish the easier it is to blend repairs in when required.

The doors on a Graystar Trailer are handbuilt to suit the trailer. 75mm styrofoam insulation is used as standard on all freezer spec doors. This, when bonded to the door panel, means a total thickness of 100mm. A double-lip door seal is fitted to the doors first and then a flexible bag seal is fitted internally. This makes the doors effectively airtight, superior to all moulded seals that are available. Double container-style door lines are used as standard to increase trailer rigidity and stop racking. This means less wear and tear and less downtime having repairs done.

Graystar Trailers are affiliated

with all the major suppliers of bolt-on equipment. We have the ability to build almost anything that is required. In fact, a majority of our trailers are custom-built one-offs for specific applications. We are

always looking at new ideas and products from around the world – this has enabled us to come up with concepts that have not been used before in Australia. Our design for a trolley load restraint system was a world

first. Graystar Trailers – the number one refrigerated semi trailer for the discerning transport operator.
